Launching The Millinocket

Job Specs

Weight: 2157 Tons

Dimensions: 330'L x 94'W x 105'H

Equipment Used: 52 axlelines of ESE's, 44 axlelines of SLE's, 6 ppus, loading ramps, high volume water pumps and winches for barge securement

The Berard Team is proud to once again take part in the future of our armed forces. The team loaded out another 2,157 joint high speed vessel, (JHSV) named the Millinocket, in Mobile, Alabama. On day one of the project, the team transported the JHSV from the client's final assembly bay to a deck barge. Once secured on the barge, it traveled down river to be transloaded the next day. Day two brought the transloading of the JHSV onto the Alabama, an 800' floating drydock. As usual, the transload went smoothly thanks to all involved through all the hard work and dedication to getting the job done safely and successfully by our dedicated team members!

On The Road Georgia Bound

Job Specs

Weight: 200 to 360 Tons

Equipment Used: 24 axlelines of SLE's, loading ramps & high volume water pumps.

The Berard Team recently tackled a job in the great state of Georgia that involved transporting some 340T machine components from port to site which involved an over the road transport and a heavy transport from a barge discharge site. The challenges were a nine foot tide variance which limited roll off times and local curfew to accommodate work and school traffic. The team used twelve axle double wide configurations to haul the heavy components and twelve axle single wide for the smaller components. The route did not come without challenges as there were three culverts that had to be bridged to avoid any compromise of the structures. Berard met the challenge and performed the project on time and without injury or incident. Another job complete and another success for the team!

Hurricane Season!

It's that time of year again, hurricane season. As we all know, hurricanes cost billions in property damage as well as the threat of loss of life due to the high winds and storm surge they bring. It's important to be prepared and alert to insure that you and your family have a plan of action if one comes your way.

The team at Berard also knows how the threat of hurricanes can cause delays on projects and that's why we work closely with our clients to adjust schedules to help keep projects moving along.

On the right you'll find some helpful tips that will keep your family safe and prepared this hurricane season.

Hurricane Preparedness Tips:

- Determine safe evacuation routes inland.
- Learn location of official shelters.
- Make emergency plans for pets.
- Check emergency equipment, such as flashlights, generators and battery-powered NOAA Weather Radio
- All Hazards and cell phones.
- Buy food that will keep and store drinking water.
- Buy plywood or other material to protect your home.
- Clear loose and clogged rain gutters and downspouts.
- Trim trees and shrubbery.
- Decide where to move your boat in an emergency.
- Review your insurance policy.

Happy Birthday!

From The Berard Team

Berard sends our best Happy Birthday wishes to these dedicated Team Members this month:
