On The Road The Heat Exchanger Project

Job Specs

Weight: 1,092 Tons Total

Equipment Used:

24 axle lines of SPMTs,
12 line THP Trailer,
stands, mats, loading
ramps and high volume
water pumps

Berard transported several reactor/exchanger packages totaling 1,092 tons from the Port of Houston, Texas to a nearby chemical plant. Berard designed and executed the logistics plan to receive and transport (2) 210 ton reactor/exchangers, and (2) 153 ton vaporizers. The team also transported (2) 113 & 100 ton compressors using a 12 axle line THP, along with multiple oversize loads to plant. The final over the road portion of the trip took place during nighttime hours to minimize traffic interruption. The team crossed the high loads under an overpass as well as two rail crossings along the route, with one having a steep grade that was easily handled by the SPMTs. Great job by all on the project!

Showtime! Berard @ Topsides!

The team will be at the Topsides, Platforms & Hulls Show February 21st -23rd. The event will be held at its new home in the Ernest Morial Convention Center in New Orleans, Louisiana. The show is a high-level technical conference and exhibition and connected with key decision makers and technical experts directly involved in the topsides industry. Over three days, Topsides, Platforms and Hulls features presentations covering technical issues, business challenges and future trends, plus an exhibition of products and services from dozens of key engineering firms, contractors, suppliers and service providers.

Come out and see the Berard Team!
