The Austin Tree Transport

Job Specs

Weight: 300,000 lbs.

Equipment Used:
12 axle lines of SPMTs and 2
power packs

The team traveled to Austin, Texas to transport a 150 year old oak tree. The tree was moved to a new location due to a parking garage being constructed on its original site, much to the delight of Austin residents. Weighing in at 300,000 pounds and boasting a 39-inch diameter trunk, crews patiently transported the four-story tall tree past street lights and between buildings to its new location at Waterloo Park. Several bystanders were on hand to witness the big event. It's not often you see a giant oak tree moving through downtown Austin and the Berard team was glad to take part in the history making event.

The Shipyard The Tugboat Load Out

Job Specs

Weight:

340,000 lbs

Dimensions:

72'L x 30'W x 53'-6"H

Equipment Used:

12 axle lines of SPMTs, 2 power packs, loading ramps, steel plates and winch trucks

When a local shipyard needed a tugboat loaded out, they called in the Berard team. A total of 12 axle lines of SPMTs were used to lift the 340,000 lb. vessel from its supports. With it now lifted, the supports that once held it during construction were removed. Now with a clear path, the team slowly moved it forward and executed a right hand turn to line it up with the client's dry dock. Steel plating was laid to combat the wet and muddy conditions as the vessel rolled through the yard on its way to the dry dock. The team slowly moved onto the loading ramps and onto the dry dock to the final position and lowered to the new supports. The Berard team helps many shipyards keep their project schedules moving, and this project was just another example of that.
