Load Out! Berard Loads Out Offshore Deck

Job Specs

Weight: 1,775 Tons

Dimensions:
71'L x 76'W

Equipment Used:
16 axle lines of SPMTs, 2
power packs, loading ramps
& winch trucks

An offshore deck being fabricated and loaded out is a great sight to see in the oil and gas industry right now. The Berard team assisted a south Texas fabricator in loading out this 1,775 ton offshore deck. In the early morning hours the team set forth a plan to carefully lift and transport the massive structure from its fabrication area to a deck barge. Steel plating was utilized to help support the weight as the SPMTs slowly rolled the deck through the yard on its journey to the deck barge. A ballast plan was carefully executed as the load was transferred onto the barge and into final position for sea fastening. Hats off to our incredible team for working together with our client and making this another job well done!

The Shipyard Launching EPF 11 – Puerto Rico

Job Specs

Weight: 2,200 Tons

Dimensions:

338'L x 94'W x 105'H

Equipment Used: 112 axle lines of SPMTs, 4 power packs, loading ramps, high volume water pumps and winches for barge securement

The Berard team played a major role in the launching of another great US Navy ship. The team loaded out the Puerto Rico, a 2,200 ton Expeditionary Fast Transport ship (EPF). This type of vessel was formally classified as a Joint High Speed Vessel (JHSV). The team transported the EPF from the client's final assembly bay to a deck barge. Once secured on the barge, it traveled down river to be trans-loaded. Once at the transfer point, the trans-loading of the vessel onto the Alabama, an 800' floating dry dock, began. As usual, the trans-load went smoothly thanks to all involved. With the team's hard work and dedication, the job was completed safely and successfully in only one day.
