Four Cranes In One Day Virginia STS Crane Transport Project

Job Specs

Weight:

1,833 Tons

Dimensions:

490'L x 100'W x 260'H

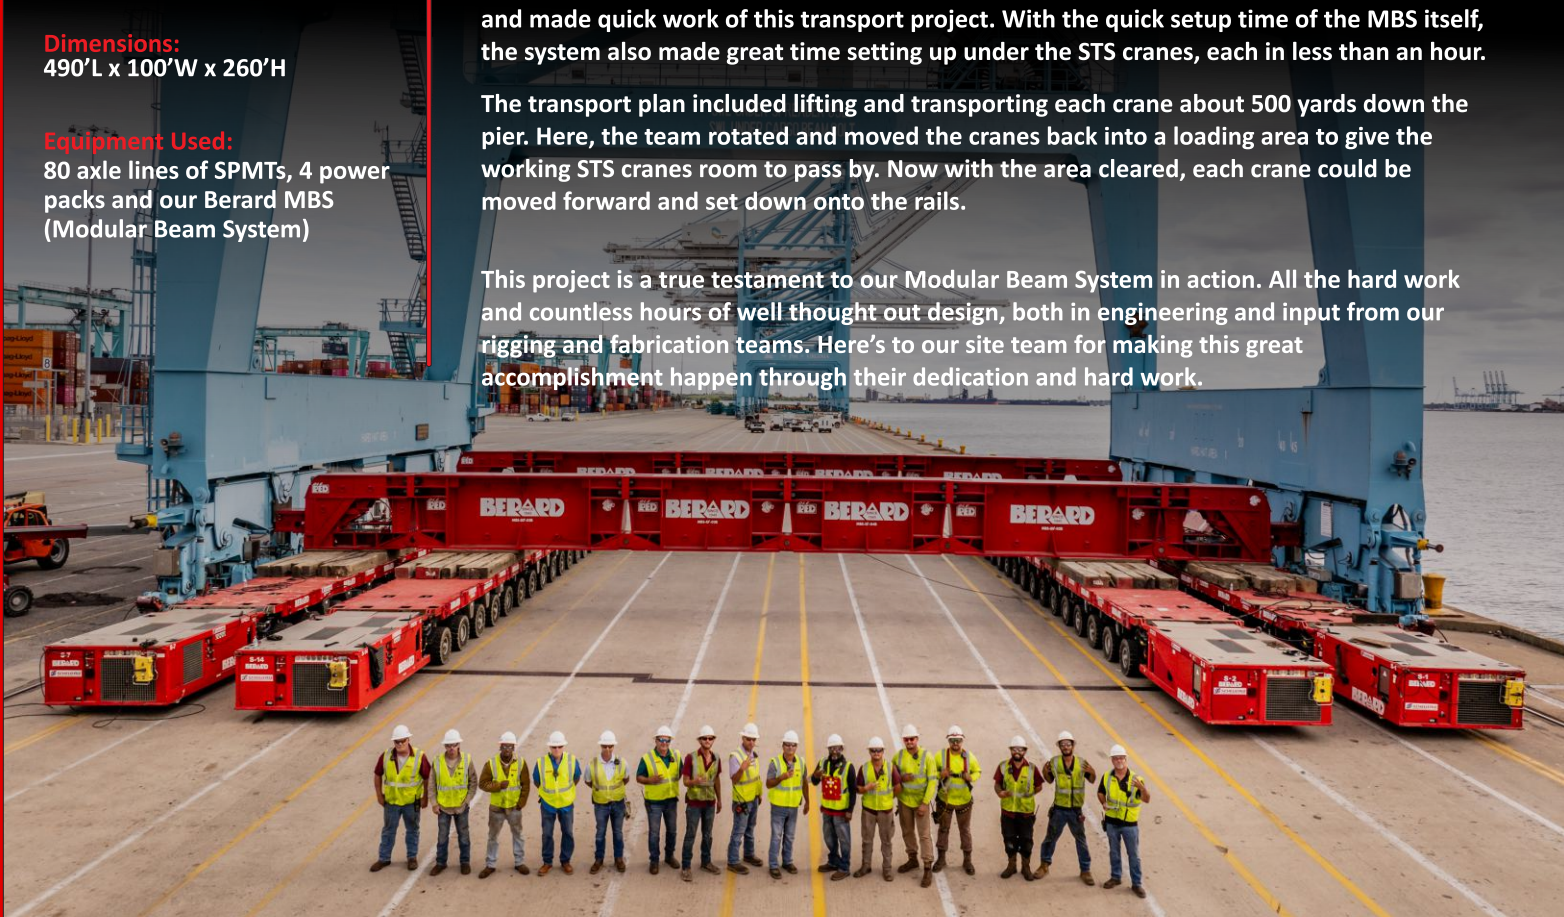

Equipment Used:

80 axle lines of SPMTs, 4 power packs and our Berard MBS (Modular Beam System)

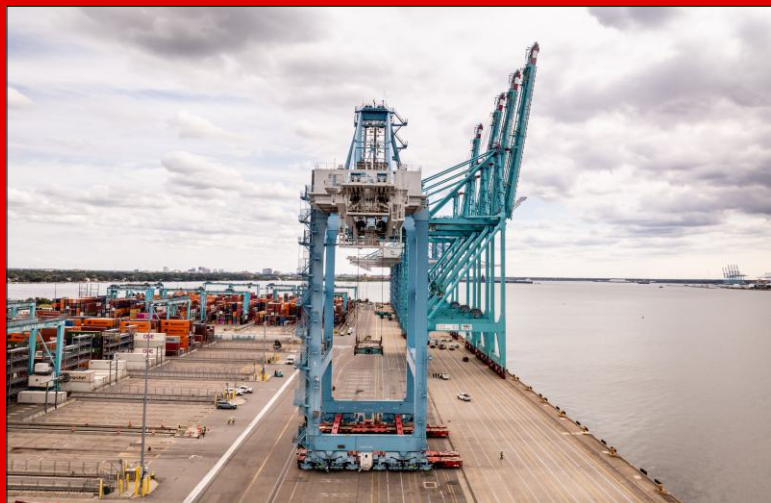

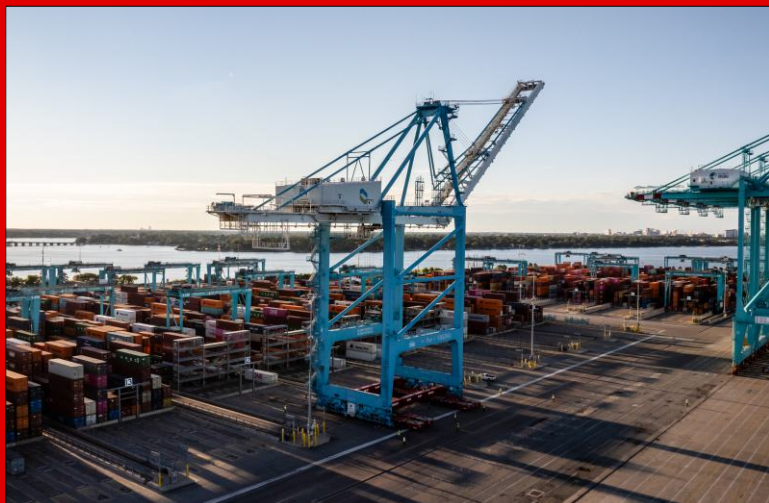

A monumental feat, four STS cranes moved in a single day. The Berard team did just that. What originally was a two day project to transport four 1,833-ton STS cranes at the Port of Virginia, was accomplished in only one day due to having the right tools for the job. Berard's in-house custom designed Modular Beam System (MBS) preformed as designed and made quick work of this transport project. With the quick setup time of the MBS itself, the system also made great time setting up under the STS cranes, each in less than an hour.

The transport plan included lifting and transporting each crane about 500 yards down the pier. Here, the team rotated and moved the cranes back into a loading area to give the working STS cranes room to pass by. Now with the area cleared, each crane could be moved forward and set down onto the rails.

This project is a true testament to our Modular Beam System in action. All the hard work and countless hours of well thought out design, both in engineering and input from our rigging and fabrication teams. Here's to our site team for making this great accomplishment happen through their dedication and hard work.

The Shipyard Loading Out C1405

Job Specs

Weight:

2,160 Tons

Dimensions:

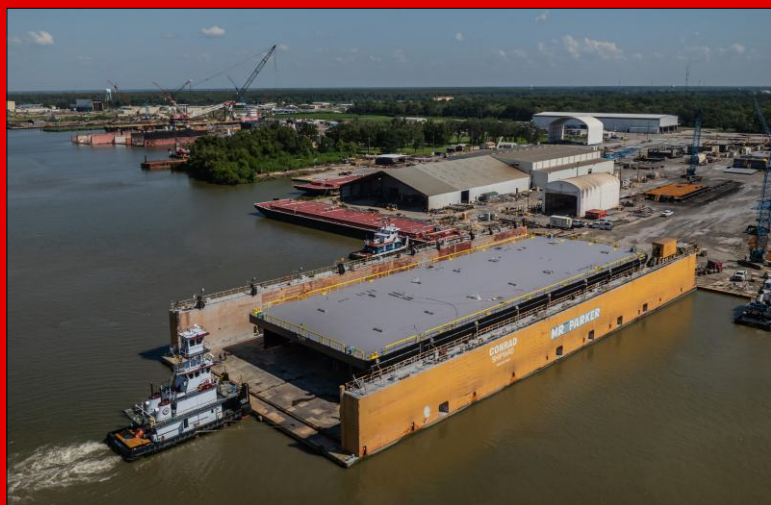

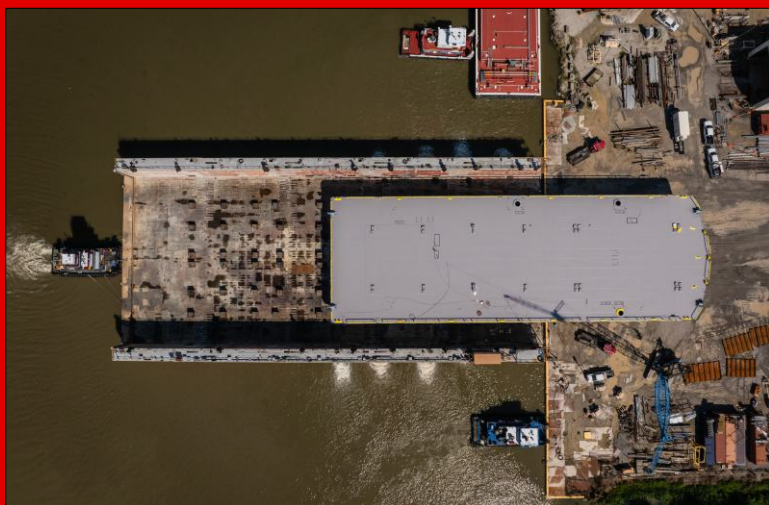

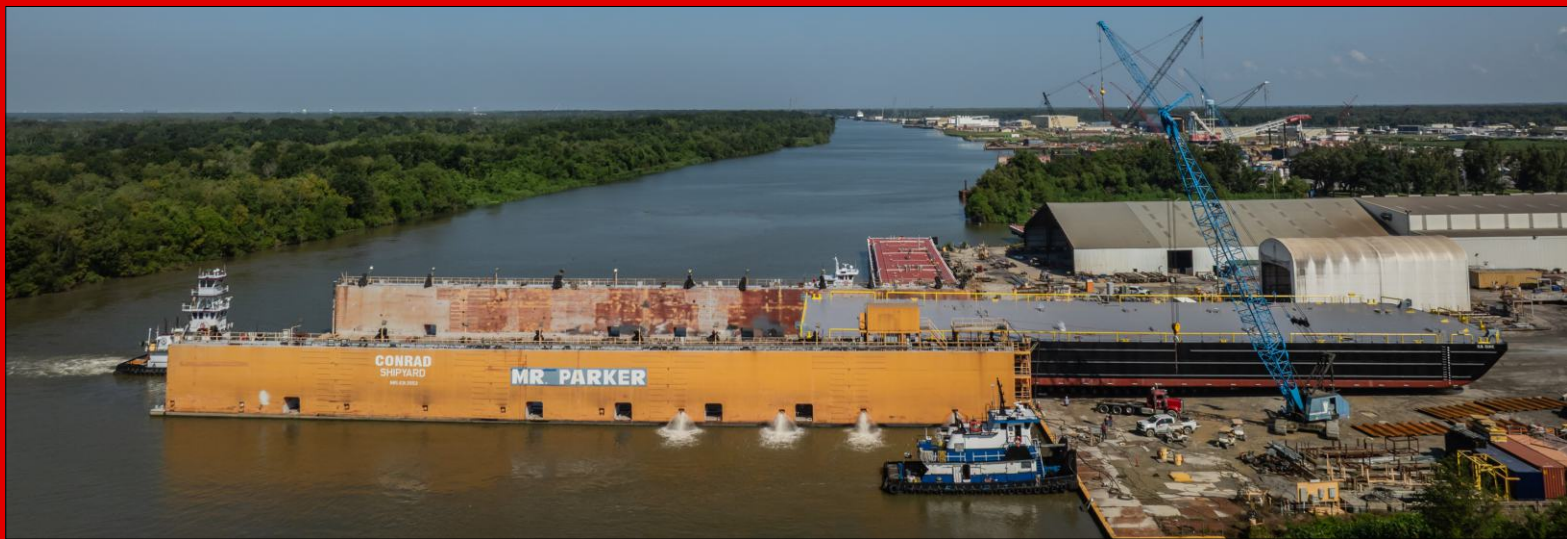

300' L x 100' W

Equipment Used:

72 axle lines of SPMTs, 4 power packs,
2 spacers, barge ramps and winch
trucks

Berard recently loaded out this massive barge for a longtime client in South Louisiana. Our team is no stranger when it comes to handling some of the largest barges in the United States. The team carefully lifted the 2,160-ton barge from its support stands at the fabrication area, then began the transport process to the client's dry dock. The barge was transported on 72 axle lines of self propelled modular transporters which proved to be essential for navigating the cargo around obstacles in the transport path. At the bulkhead, the team coordinated with the client's dry dock ballast team and began the roll on process. In under an hour the barge was fully loaded on the dry dock and lowered into final position. Thanks to our awesome team for making this another successful project.

CELEBRATING 80 YEARS OF EXCELLENCE

New

Berard is celebrating a major milestone in 2025, marking 80 years of operation and a reputation for excellence that dates back to 1945. We have consistently demonstrated our capabilities in transporting extraordinary cargo, and our commitment to being the best in the industry remains unwavering. Throughout our history, we have developed strong relationships with clients and team members, and we are committed to continued investment in state of the art heavy transport equipment. As we commemorate eight decades of success, we eagerly anticipate many more years of delivering dependable service to our clients.

Special Delivery Berard Adds Additional SPMTs To Fleet

Berard recently took delivery of 28 additional axle lines of Scheuerle self propelled modular transporters. We're constantly investing in the latest heavy transport equipment to keep up with our increasingly busy schedule. 2025 marks our 80th year in business and this new 28 axle line delivery is the same one as our first set we ordered in 2003. The set consists of (4) 4 lines, (2) 6 lines and 2 power pack units. The first set we ever ordered went right to work at the Port of Iberia and now the new set went right to work as well at the Port of Jacksonville Florida. We would like to thank our clients who've trusted us over the years and made our continued investment in our company possible.

Showtime! Breakbulk Americas

It's show time once again!

The Berard team will be exhibiting at the 35th annual Breakbulk Americas held at the George R. Brown Convention Center in Houston, Texas from September 30th to October 2nd. Breakbulk Americas is the region's largest and longest-running trade event for the industry with representatives from the entire supply chain, representing the key players in Canada, the U.S., Mexico and throughout Latin America.

Our sales and marketing team will be on hand at booth Q01, located right at the main entrance to greet everyone and introduce our great company and our services. See you in Houston!
